1	What Is a Computation?	1
1.1	Computation as Transformation	1
1.2	Computation as Reaction to Events	4
1.3	Algorithms	6
1.4	From Algorithms to Software	12
1.5	Exercises	13
2	Invoking a Computation	15
2.1	Expressions and Commands	16
2.2	Changing State: Assignment	19
2.3	A Variety of Notations	26
2.4	Parsing	27
2.5	Exercises	30
3	Simple Types: Numbers, Text, Booleans	35
3.1	The Organization of Computer Memory	36
3.2	Text	39
3.3	Collections of Numbers and Plotting	46
3.4	Booleans: True or False	53
3.5	Logical Operators	57
3.6	Exercises	59
4	Collections and Indexing	65
4.1	Indexing	65
4.2	Matrices	74
4.3	Mixed Data Types	79
4.4	Exercises	84
5	Files and Scripts	87
5.1	Filenames	88
5.2	File Operators	94

5.3	Importing and Exporting Data	96
5.4	Scripts	102
5.5	Scripts as Computations	106
5.6	Exercises	108
5.7	Project: Time for a Cool Cup of Coffee	110
6	Functions	113
6.1	Computations without Effects	113
6.2	Creating Functions	116
6.3	Functions as Arguments	122
6.4	Wrapper Functions	124
6.5	Returning Functions as Values	126
6.6	Exercises	127
7	Conditionals	133
7.1	The <code>if</code> Statement	134
7.2	More Than Two Cases	136
7.3	Completeness and Exclusivity	137
7.4	Switch/Case	141
7.5	Exercises	144
7.6	Project: The Morse Code	146
8	Loops	149
8.1	FOR Loops	151
8.2	Accumulators	153
8.3	Nested Loops	154
8.4	Example: Optimal Matching with Nested Loops	156
8.5	Element-by-Element Operators	159
8.6	Outputs of Unknown Size	162
8.7	Loop Termination	163
8.8	Conditional Looping	164
8.9	Example: Measuring Information	166
8.10	Dimensions and Arrays	172
8.11	Exercises	176
8.12	Project: Cellular Automata	184
8.13	Project: The Mandelbrot Set	188
9	Scope	195
9.1	Environments and Scope	196
9.2	The Debugger	197
9.3	Shared Environments	203
9.4	Scoping of Functions	206
9.5	Pass by Reference	210
9.6	Warnings and Errors	211
9.7	Testing Functions	216
9.8	Optional and Default Arguments	219

9.9	Exercises	222
9.10	Project: Precision Graphics and the Electrocardiogram	225
10	Events	231
10.1	Activating Input Devices	232
10.2	Example: Recording the Times of Events	238
10.3	Example: Exploring the Mandelbrot Set	241
10.4	Inputs without Waiting	243
10.5	Exercises	247
11	Arranging Data: Searching and Databases	251
11.1	Datasets	253
11.2	Selecting Subsets from Tables	255
11.3	Combining Tables: Union and Intersection	257
11.4	Databases	258
11.5	Efficient Searching for Matches	269
11.6	Simultaneous Collection and Access of Data	277
11.7	Exercises	281
11.8	Project: A Bridge Database	284
11.9	Project: Random Generation of Text	291
12	Trees and Recursion	295
12.1	Simple Recursion	296
12.2	Multiway Recursion	301
12.3	Accumulators	303
12.4	Example: Optimal Matching (Recursive)	305
12.5	Trees as Data Structures	309
12.6	Processing Trees	312
12.7	Example: Huffman Encoding of Information	313
12.8	Exercises	317
12.9	Project: Clustering of Data	320
13	Sounds and Signals	325
13.1	Basics of Computer Sound	326
13.2	Perception and Generation of Sound	328
13.3	Synthesizing Complex Sounds	331
13.4	Transducing and Recording Sound	333
13.5	Aliasing and the Sampling Frequency	339
13.6	Exercises	347
13.7	Project: The Perception of Beats	350
13.8	Project: Changing the Speed of Sound	352
14	Images	355
14.1	Black-and-White Images	355
14.2	Color	358
14.3	Digital Sampling of Images	360
14.4	Sampling and Storing Images in Files	362

14.5	Manipulating and Synthesizing Images	365
14.6	Example: The Mona Lisa’s Missing Blue	368
14.7	Exercises	371
14.8	Project: Landsat Images and False Color	372
15	Numbers and Precision	377
15.1	Types of Numbers	378
15.2	The Capacity of Floating Point Numbers	385
15.3	Numerical Error	387
15.4	Example: Global Positioning	391
15.5	Exercises	394
16	Mathematical Relationships with One Unknown	397
16.1	Representing Mathematical Relationships	399
16.2	Zeroing in on Solutions	402
16.3	Derivatives	408
16.4	Going to the Extremes: Optimization	412
16.5	Fitting	423
16.6	Interpolation	428
16.7	Exercises	436
17	Mathematical Relationships with Two or More Unknowns	443
17.1	Visualizing Functions of Two Variables	446
17.2	Notation for Functions of ≥ 2 Variables	453
17.3	Geometry of Functions: The Gradient	455
17.4	Optimization Using the Gradient	459
17.5	Finding Solutions	466
17.6	Solutions to Systems of Linear Equations	467
17.7	A Geometric Interpretation of $A \cdot x = b$	472
17.8	Least Squares Solutions	475
17.9	Solutions to Systems of Nonlinear Equations	483
17.10	Exercises	491
17.11	Project: Alignment of Images	496
A	ASCII Characters	503
B	Matrix Operations	505
C	Binary Flat Files	509
D	Program Index	513
E	Data Files	517
F	Solutions to Selected Exercises	519
	Bibliography	535
	Index	537

About the Author

Danny Kaplan teaches applied math, statistics, and scientific computing at Macalester College in St. Paul, Minnesota. His research concerns the uses of nonlinear dynamics (“chaos theory”) in the analysis of time series, with a particular emphasis on variability in physiological systems. He has a B.A. in physics from Swarthmore College, an M.S. in engineering economic systems from Stanford University, and a Ph.D. in biomedical physics from Harvard University. He has taught at M.I.T. and McGill University and worked as a signal processing engineer for a medical instrumentation company. He has also previously worked as an economist at the Department of Energy modeling energy consumption and conservation.

He is the co-author of *Understanding Nonlinear Dynamics*. He and his wife, Maya, have three daughters.
