“For humankind the ocean is a hostile environment. Yet between 1450 and 1850 the discovery that all the seas were one and the projecting of economic and political power on a global scale reshaped the course of history. In the process, this dangerous and poorly understood place, where people could venture but never remain, came to occupy a pivotal position in human affairs.”

Welcome to the History Department’s latest take on Oceans! In the early modern period, people started to venture farther outward into oceans that had previously been understood as dangerous and hostile environments. This course takes the Age of Sail and the Atlantic, Pacific and Indian Oceans as starting points to track changes in human approaches to boundless waters. We will consider two questions in particular:

-How have oceans functioned as a means of global integration as well as division?

-How are historians using oceans to further the study of world (vs. regional) history?

Some of the themes we will consider include diaspora, port cities, banditry, trade, and imperial encounters.
COURSE FORMAT

This is a 300-level history course, meaning it is both reading and writing intensive. It is designed for you to practice (and question) the writing conventions followed by professional historians. We will start the semester by considering five different historians’ interpretations of oceans. In November, during the last part of the semester, you will write a 10-15 pp. research paper in which you will present your own original interpretation of a historical source related to an ocean. Our initial readings are intended as models and springboards for you to chart your own navigational path with this paper.

*Please note:* your research paper is *not* a Wikipedia-style entry in which you spew out everything you can find in secondary sources about your chosen ocean. It is an exercise in historical analysis that begins with an interesting primary source or historical document. In trying to understand your primary source selection, you will look to secondary material; finally, you will make a case for how your particular document has complicated or changed how you think about an entire ocean. You will be using a specific, small historical case study to make a well-informed argument about an ocean.
