Medtronic Internship

Location:

Medtronic World Headquarters, Fridley MN
Polymer Technologies

Time commitment:

This position will be full-time in the summer months and part-time during the academic year.

Job description:

This position would be working within a polymer group to provide characterization of materials. These materials can include polymers, active therapeutics, or combinations of both. The polymer group primarily synthesizes and formulates polymers at a research level to be used in a variety of medical devices. This position would require the use of instrumentation such as HPLC, GC/MS, and GPC to characterize the materials used in the devices. The instrumentation is also used to monitor the processes used to produce the materials for the device. This position requires the ability to multitask as there are always several projects going on simultaneously.

Intern qualifications

- Completed a quantitative analysis course.
- Interested in analytical chemistry.
- Knowledge of polymers a plus.
- Careful and accurate record-keeping/data management
- Detail orientated.
